### User's Manual Ver. 03/20

Before installing and using the camera, please read this manual carefully. Be sure to keep it handy for future reference.

# Safety Information

### CAUTION

RISK OF ELECTRIC SHOCK. DO NOT OPEN.

### CAUTION:

TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK) NO USER SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

#### Warning

This symbol indicates that dangerous voltage consisting a risk of electric shock is present within this unit.

To prevent damage which may result in fire or electric shoc hazard, do not expose this appliance to rain or moisture.

### WARNING

- **1.** Be sure to use only the standard adapter that is specified i the specification sheet. Using any other adapter could caus fire, electrical shock, or damage to the product
- Incorrectly connecting the power supply or replacing battery may cause explosion, fire, electric shock, or damage to th product.
- **3.** Do not connect multiple cameras to a single adapter. Exceeding the capacity may cause excessive heat generation or fire
- **4.** Securely plug the power cord into the power receptacle. Insecure connection may cause fire
- **5.** When installing the camera, fasten it securely and firmly A falling camera may cause personal injury.
- 6. Do not place conductive objects (e.g. screw drivers, coins, metal items, etc.) or containers filled with water on top o the camera. Doing so may cause personal injury due to fire electric shock, or falling objects.
- **7.** Do not install the unit in humid, dusty, or sooty locations. Doing so may cause fire or electric shock
- 8. If any unusual smells or smoke come from the unit, stop using the product. Immediately disconnect the power sorce and contact the service center. Continued use in such a condition may cause fire or electric shock
- **9.** If this product fails to operate normally, contact the nearest service center. Never disassemble or modify this product in any way.
- **10.** When cleaning, do not spray water directly onto parts of the product. Doing so may cause fire or electric shock

#### Precaution

This exclamation point symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

### Precaution

#### Operating

- Before using, make sure power supply and all other parts are properly connected.
- While operating, if any abnormal condition or malfunction is observed, stop using the camera immediately and contact your dealer.

#### Handling

- Do not disassemble or tamper with parts inside the camera.
- Do not drop the camera or subject it to shock or vibration as this can damage the camera.
- Clean the clear dome cover with extra care. Scratches and dust can ruin the quality of the camera image.

#### Installation and Storage

- Do not install the camera in areas of extreme temperature, exceeding the allowed range.
- Avoid installing in humid or dusty environments.
- · Avoid installing in places where radiation is present.
- Avoid installing in places where there are strong magnetic ÿelds and electric signals.
- Avoid installing in places where the camera would be subject to strong vibrations.
- Never expose the camera to rain or water.

# **Important Safety Instructions**

- 1. Read these instructions. All safety and operating instructions should be read before installation or operation.
- 2. Keep these instructions. The safety, operating and use instructions should be retained for future reference.
- 3. Heed all warnings. All warnings on the product and in the operating instructions should be adhered to.
- 4. Follow all instructions. All operating and use instructions should be followed.
- 5. Do not use this device near water. For example: near a bath tub, wash bowl, kitchen sink, laundry tub, in a wet basement; near a swimming pool; etc.
- 6. Clean only with dry cloth. Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners.
- 7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions. Slots and openings in the cabinet are provided for ventilation, to ensure reliable operation of the product, and to protect it from over-heating. The openings should never be blocked by placing the product on bed, sofa, rug or other similar surfaces. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided and the manufacturer's instructions have been adhere to.
- 8. Do not install near any heat sources such as radiators, heat registers, or other apparatus (including amplifiers) that produce heat.
- 9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement.
- 10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
- 11. Only use attachments/accessories specified by the manufacturer.
- 12. Use only with cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
- 13. Unplug the apparatus during lightning storms or when unused for long periods of time.
- 14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

### **Disposal of Old Appliances**

- 1. When this crossed-out wheel bin symbol is attached to a product it means the product is covered by the European Directive 2002/96/EC.
- 2. All electrical and electronic products should be disposed of separately form the municipal waste stream stream in accordance to laws designated by the government or the local authorities.
- 3. The correct disposal of your old appliance will help prevent potential negative consequences for the environment and human health.
- 4. For more detailed information about disposal of your old appliance, please contact your city office, waste disposal service or the shop where you purchased the product.

# FCCC

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

# Introduction -Product & Accessories

**NOTE:** The 'Test Monitor Cable' is used to test the camera by connecting to a portable display.

# Introduction -Part Name & Functions

### Dome Cover

Covers the inner cover, lens, and main body to protect them.

### 2 SD Card Slot

#### 8 Reset Button

All the settings will be restored to the factory default. Power On the unit and push the button for 5 seconds.

#### 🔀 WARNING

YOU WILL LOSE ALL DATA THAT HAD BEEN ENTERED PREVIOUSLY AND THE IP DOME CAMERA WILL BE SET TO ITS FACTORY RESETS.

#### 4 Main Body

Includes a lens, a connecting slot, a PCB board, screws and such.

#### **5** Tilt Stopper Screw

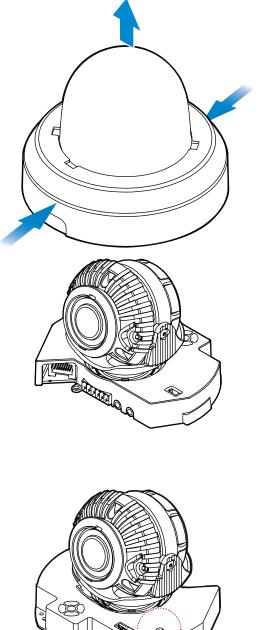

Using this screw, the slope of the lens can be adjusted and fixed.

- 6 Test Video Slot Use it to connect the test video calbe.
- Audio In/Out Port
- 8 Terminal Block Connect the power, alarm I/O device.
- 9 RJ-45 Connector Connect the crossover cable.

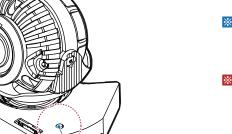

# Installation -Disassemble the camera

### Before installing your camera, you have to read the following cautions.

- 1. You have to check whether the location can bear five times of the weight of your camera.
- 2. Don't let the cable to be caught in improper place or the electric line cover to be damaged. Otherwise it may cause a breakdown or fire.
- 3. When installing your camera, don't allow any person to approach the installation site. If you have any valuable things under the place, move them away.

1 Detach the dome cover from main body by squeezing the front and back of dome cover.

**Reset Button** 

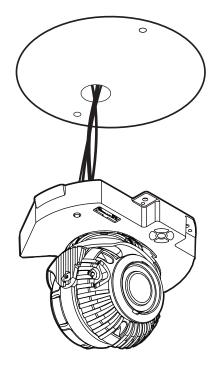

### **Reset to the Factory Default**

Press the reset button for 5 seconds to return the setup to the factory default.

### 🔀 Warning:

If you press the 'Reset' button, you will lose all setting data. If needed, please, make a note for further installation

# Installation -Installation

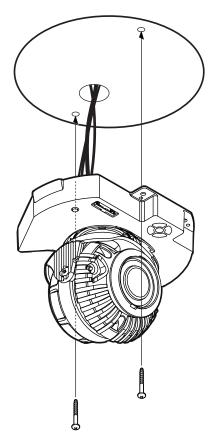

### **2** Making holes on the Ceiling Panel

To pass cables through the ceiling and insert plastic anchor, drill holes on the ceiling panel by using provided template sheet.

### 3 Connecting Cables

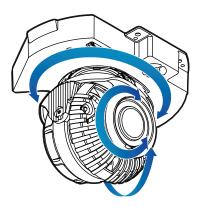

Connect the power, audio, alarm and network cables respectively. See the section 2 'Installation - Cabling' for details.

#### 4 Fix the main body

Insert the plastic anchor into the hole and fix the main body on the ceiling by screw provided.

# Installation -Installation

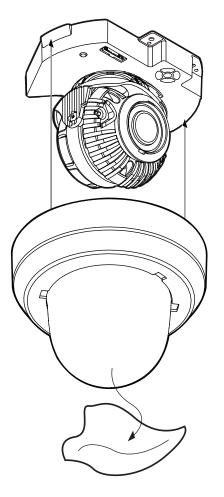

### **5** Adjusting Camera Angle

To achieve desired view direction and orientation, rotate 3-axis gimbal. To fix the setting, tighten the Tilt stopper screw.

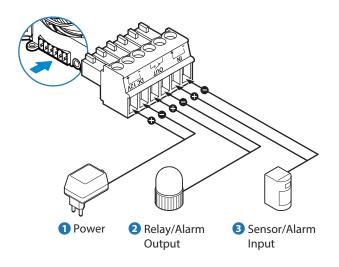

**6** Adjusting View angle

By turning screws of the lens, decide the view angle.

- Attaching the Dome cover After aligning dome cover on to the main body properly, push the dome cover.
- Oetaching the Protection Film Detach the protection film from the dome cover after finishing all installation.

# Installation -Cabling

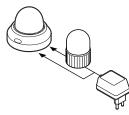

### 1 Power Connection

Please, check the voltage and current capacity of rated power carefully.

Rated Power	Current Consumption	PoE
DC 12V	AF Working Max 7.5W IR ON : 4.2W / OFF : 2.5W	IEEE 802.3af Class3

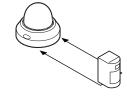

### 2 Relay/Alarm Output

It connects to the alarm lights, siren or lamps, and it is activated according to the Setup menu setting.

#### 3 Sensor/Alarm Input

It connects to IR sensor, IrDA sensor or door switch. If the sensor is activated, it can activate to work the alarm device.

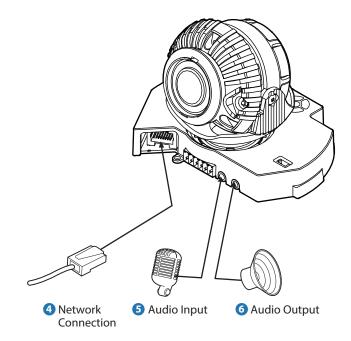

4 Network Connection

### 5 Audio Input

Cable of the sensor/alarm input device should connect to alarm in+ and alarm in- of the cable slot.

#### 6 Audio Output

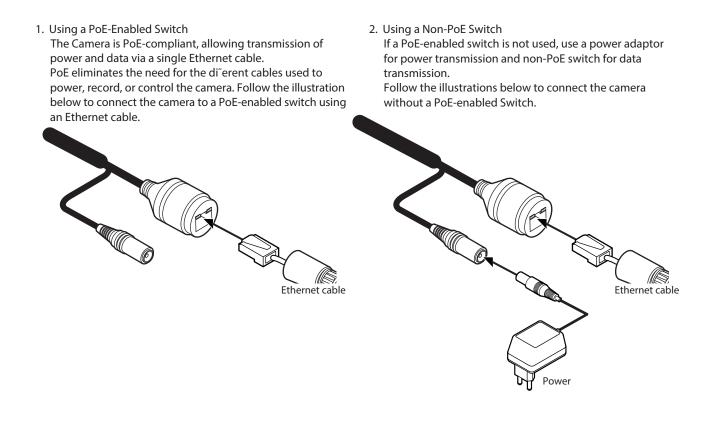

It connects to the alarm lights, siren or lamps and the sensor types are normal open and normal close. Cable of the alarm output device should connect to alarm out+ and alarm out- of the cable slot.

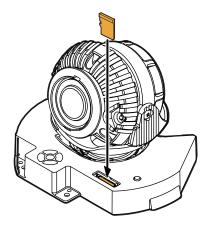

# Installation -Cabling

### **Two Options**

Use a PoE-enabled switch to connect data and power through a single cable and begin viewing and recording images instantly. A non-PoE switch will require an adaptor for power transmission.

# Installation -Inserting/Removing an SD Memory Card

The memory card is an external data storage device that has been developed to offer an entirely new way to record and share video, audio, and text data using digital devices.

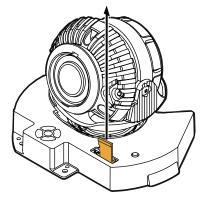

- Recommended SD Card Specification (*Not Included*)
  - Type: Micro SD (SD/SDHC/SDXC)
  - Manufacturer: Transcend, Kingston, Toshiba, SanDisk
  - Capacity: 4GB~128GB
  - Class: over UHS-I U3 Class 10

### 1 Inserting an SD Memory Card

Insert the SD card in the arrow direction.

Don't insert the SD memory card while it's upside down by force. Otherwise, it may damage the SD memory card.

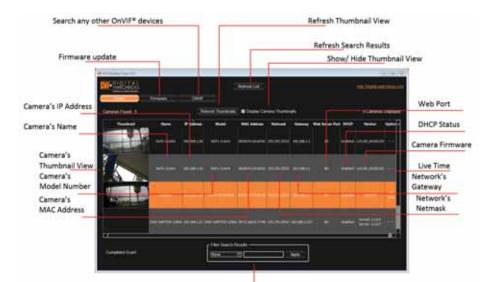

### 2 Removing an SD Memory Card

Removing an SD Memory Card Gently press down on the exposed end of the memory card as shown in the diagram to eject the memory card from the slot.

- Pressing too hard on the SD memory card can cause the card to shoot out uncontrollably from the slot when released.
- If you have saved data in the SD memory card, removing the SD memory card prior to setting record to OFF will cause damage to the data stored in the card.

# Network Setup -DW IP Finder™

- Go to: http://www.digital-watchdog.com and search for 'IP Finder' on the quick search bar at the top of the page.
- 2 The latest IP Finder software will appear in the search results. Click on the link to download the file to your computer.
- S The software will scan your network for all supported cameras and display the results in the table. Allow up to 5 seconds for the IP Installer to find the camera on the network.
- O you can press the 'Refresh List' to search the network again, or filter the search results by entering a value in the filter box at the bottom of the page.
- Otheck the box next to 'Display Camera Thumbnail' to view a JPEG image of the camera's view next to the camera name on supported models.
- Select DHCP if the internet service is dynamic IP. This will allow the camera to receive its IP address from the DHCP server.
- Select STATIC to manually enter the camera's IP address, subnet mask, Gateway and DNS information.
- f) Contact your network administrator for more information.
- O The camera's default network information is:
- Default TCP/IP information
  - IP: 192.168.1.80
  - Subnet Mask: 255.255.255.0
  - Gateway: 192.168.1.1
  - DNS: 168.126.63.1

Filter Search Results

- To view the camera's web client, click on 'View Camera Website'.
- A 'Port Forwarding' has to be set in your network's router for external access to the camera.
- <sup>(3)</sup>To save the changes made to the camera's settings, input ID and PW of the camera for authentication.
- If the camera needs to be rebooted after the settings were changed, press the 'Reboot' button. The camera will power cycle and will appear back in the search results once the reboot is complete.
- 1 Default ID / PW : admin / admin
- Click 'Save' to save changed values.
- To update the camera's firmware from the DW IP Finder™, click on the firmware tab, upload the firmware file and select the cameras to update. You can update multiple cameras at the same time.

# Network Setup -Quick Start of Network Connection

# Please follow the steps below to complete the initial setup of the network function.

- 1 Please do not power on the IP Camera until instructed.
- Temporarily disable any proxy servers configured in internet Explorer.
- If connecting the IP Camera directly to a modem, power down and reset the modem. Leave the modem powered down until configurations are finalized with the IP Camera and the IP Camera has been correctly connected to the modem.
- 1. Connect the IP Camera and PC to the configured network.
- 2. Open the IP Installer on a PC, then search for the IP camera.
- If you have a DHCP server, it will automatically set the Camera IP.
  If you do not have a DHCP server, Camera IP is set to 192.168.1.80 after one minute. In this case, PC IP must be changed to the IP to be able to access the 192.168.1.80.
- **3.** If multiple numbers of camera are connected it should be distinguished by the mac address of the Camera.
- 4. Click the Camera IP, and connect to the WEB PAGE.
- 5. Default ID/Password to access IP Camera are both the word: admin.
- 6. Familiarize yourself with the Viewer Interface Screen.
- 7. please install VLC to display live video.
- The IP setting can be set to 'STATIC' at IP Installer or web viewer followed by Setup -> Network -> Network Settings.
- **9.** If the IP Camera is connected to a network which utilizes a router, you must have Port Forwarding configured on your personal router to forward all ports to the IP address you have assigned the IP Camera.
- 10. After configuring Port Forwarding on your router (if necessary), you may access your IP Camera on your local network by opening Internet Explorer and specifying the IP address and Web Port that you have assigned to the IP Camera.
- Example: http://192.168.0.200:8888
- () If you leave your Web Port set to 80, you don't need to specify the port in the Address Bar to access to your IP Camera.

11. Access your IP Camera via the Internet :

#### If you use a static IP address assigned by your ISP

- 1) Open Internet Explorer.
- 2) Type the IP of the IP Camera.
- 3) If you use a router, type the routers' static IP and the web port number of the IP Camera.

#### If you have a dynamic address provided by your ISP

- 1) Open Internet Explorer and visit the DDNS website.
- 2) Register the IP Camera.
- 3) Reboot the IP Camera.
- 4) Give the DDNS server 10 minutes to locate your IP Camera's IP information.
- 5) Click the refresh button in the Internet Explore.
- 6) After your camera is connected, select your camera.

# Network Setup -DDNS Registration

If you have DYNAMIC IP service from your Internet Service Provider (ISP), you can't tell the current IP address of the IP Camera. To solve this problem, you have to register to our DDNS service.

At first, you have to check if you are using dynamic addressing. If so, register your IP Video Server on our DDNS website before you configure, setup, or install the IP Camera.

Even though your IP is not dynamic, you will get benefit if you register to DDNS. In this case, just remember 'hostname.dyndns.com/gate1' instead of complicated series of numbers like http://201.23.4.76:8078.

For more details, contact our Support Center.

 To use a public DDNS called 'dyndns' or 'no-ip', refer to the detail information on how to use the service.
 (Visit the web site : http://www.dyndns.com or http://www.no-ip.com)

# Network Setup -Guide to Network Environment

Please configure the IP Camera at the installation site. You must determine your network scenario in order to configure the IP Camera with the proper TCP/IP settings. This tutorial will guide you through the process. Before actually configuring the IP Camera, determine settings to be applied. Record those settings to be used to configure your IP Camera for reference.

When configuring your IP Camera, treat the IP Camera as another PC on your network. You will assign it several addresses and other TCP/IP properties to match your current network.

This step-by-step tutorial will teach what IP addresses and network configurations should be assigned based on the network scenario.

 Before you begin, locate any information and settings received from your Internet Service Provider (ISP). You may need to refer to these IP addresses at a later time during the configuration.

Current TCF	P/IP Settings
IP Address	
Subnet Mask	
Default Gateway	
Primary DNS Server	
Secondary DNS Server (Option)	

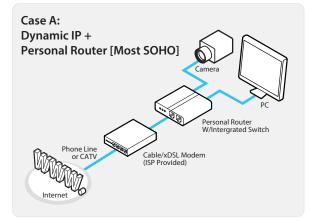

Static Dynamic

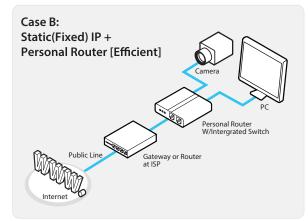

- If you were not given any IP addresses or the ISP was responsible for the setup and installation of your Internet connection, go to step 2.
- If you are not using a router on your network, your 'Current TCP/IP Settings' (from the previous section) and 'Assigned IP Addresses from My ISP' will be exactly the same.
- 2. You must determine whether the IP address is STATIC or DYNAMIC. At this moment, you are only concerned about the ISP. Did they provide you with a STATIC or DYNAMIC address? If you are unsure, contact your ISP.
- **3.** Configure your IP Camera's TCP/IP settings for network connectivity by selecting Setup from the main interface and selecting TCP/IP located on the left of the Setup screen.
- 4. If prompted for ID and Password, use 'admin' for both entries.

The default web port number is 80. If port 80 is blocked by the ISP, a value between 1025 ~ 60000 should be used. If TCP port 80 is blocked, consult the ISP

- 5. The following descriptions are several basic network scenarios. Determine which scenario describes your network. If your network does not match one of the scenarios below and you are unsure how to setup your IP Camera, contact your network administrator and then call our Support Center.
- You cannot control the rectangular gray areas and only the ISP has access to the devices.

# Network Setup -Setup Case A, B

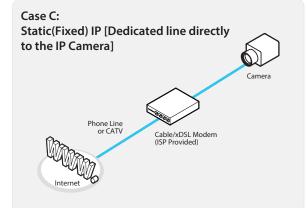

# Configure your IP Camera's TCP/IP properties as follows :

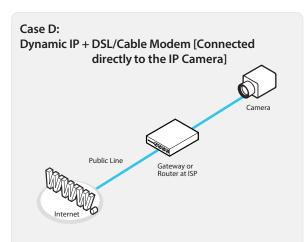

- 1. Network Type : STATIC (even though you have Dynamic IP from your ISP, use STATIC on the IP Camera)
- 2. Internet Address : A private IP address such as 192.168.0.200 (Example)
- 1) You need to assign an IP address to the IP Camera just as you do with PC.
- The IP address you assign must be unique to your network and match your network as well. For information on how to choose a unique IP and match your network, read the FAQ.
- 1 The IP address you assign must be a private IP. For information on how to choose a private IP please, read the FAQ.
- **3. Subnet Mask :** 255.255.255.0 (Example)
- You must use the same subnet mask as the one you noted under 'Current TCP/IP Settings'.
- 4. Default Gateway: 192.168.0.1 (Example)
- **1** This IP address must be the IP address of your router. (private or LAN side)
- Use the same Default Gateway you noted under 'Current TCP/IP Settings'.
- 5. Preferred DNS Server : Use the 1st DNS Server from 'Assigned IP Address from My ISP'.
- () If you did not receive any IP addresses from your ISP, contact the ISP and acquire the IP address of their DNS server.
- 6. DDNS Server: Use the DDNS server.
- **1** This is the same site you will register later to accommodate dynamic IP from your ISP.
- 7. Web Port: 8888
- 1 Do not use the default port 80 as this number must be changed.
- 1025 ~ 60000.

# Network Setup -Setup Case C, D

# Configure your IP Camera's TCP/IP properties as follows :

- 1. Network Type : STATIC
- 2. Internet Address : A static IP address received from your ISP such as 24.107.88.125 (Example)
- 1) You need to assign an IP address to the IP Camera just as you do with PC.
- 3. Subnet Mask : Subnet mask assigned from your ISP such as 255.255.255.240 (Example)
- 4. Default Gateway: 24.107.88.113 (Example)
- 1 Use the assigned default gateway from your ISP
- 5. Preferred DNS Server : Use the 1st DNS Server from 'Assigned IP Address from My ISP'
- **1** If you have not received any IP addresses from your ISP, contact them to acquire the IP address of their DNS server.
- 6. DDNS Server : Use the DDNS server
- This is the same site you will register later to utilize our DDNS service.
- 7. Web Port: 80
- 1025 ~ 60000. You may select any number between 1025 ~ 60000.

To connect the IP Camera directly to a modem, power down and reset the modem. Leave the modem powered down until configurations are finalized with the IP Camera and the IP Camera has been connected correctly to the modem. Then power on the modem, followed by the IP Camera.

# Configure your IP Camera's TCP/IP properties as follows :

- 1. Network Type : DYNAMIC
- 2. DDNS Server : Use the DDNS server
- 1 This is the same site you will register later to accommodate dynamic IP from your ISP.
- 3. Web Port: 80
- 10 You may select any number between 1025 ~ 60000.

# Network Setup -Port Forwarding

# After entering the correct TCP/IP settings, you are ready for 'Port Forwarding' (Cases A, B).

 Please record the TCP/IP settings of your IP Camera for future reference. You may need this information to access your IP Camera and to configure 'Port Forwarding'.

IP Camera TC	CP/IP Settings
IP Address	
Subnet Mask	
Default Gateway	
Preferred DNS Server	
DDNS Server	
Web Port	

- 2. After clicking 'Apply', the system will prompt for a reboot. Please allow the system 50 seconds to reboot and accept the changes. After 50 seconds, close the configuration screen. The view will display 'Trying to Reconnect'. If the ACTIVE light on the IP Camera has gone off and is now back on again flashing, the IP Camera has rebooted. After the system reboots completely, remove the power supply from the unit and close Internet Explorer.
- **3.** Return your PC/Laptop TCP/IP properties to their original settings.
- Before installing the IP Camera, you must use 'Port Forwarding' on your personal router (Cases A, B).
  - You will need to forward 1 ports:
    - Web Port

All the ports will be forwarded to the IP address you assigned to the IP Camera.

In the example above, you would forward: • 8888 → 192.168.0.200

For information on how to use 'Port Forwarding', please read Appendix C.

### After forwarding correctly the Web Port, through your router (if applicable), install the IP Camera in a proper location.

- 1. Locate the serial number located on the label attached to the bottom of the IP Camera, you will need this for DDNS registration.
- Connect the IP Camera to your router or cable/DSL modem (per your network scenario) via a Cat5/5e UTP Ethernet network cable.
- 3. Supply power to the IP Camera.
- 4. After 1 minute, verify the IP Camera indicators:
  - LINK : Flickering/Solid
- 5. After configuring Port Forwarding on your computer (if necessary), access your IP Camera on your local network by opening Internet Explorer and specifying the IP address and Web Port assigned to the IP Camera.
- 1 Examples: http://192.168.0.200:8888 or http://24.106.88.123
- If you left your Web Port set to 80, do not need to specify the port in the Address Bar to access the IP Camera.
- 6. Access your IP Camera via the Internet :

#### If you use Case B, C

- 1) Open Internet Explorer.
- 2) Type the IP of the IP Camera.

#### If you use Case A, D

- 1) Open Internet Explorer.
- 2) Visit the DDNS website.
- 3) Register the IP Camera.
- 4) Give the DDNS server 10 minutes (MAX) to locate your IP Camera's IP information. You may reboot the server to send an immediate request to our DDNS server.
- 5) After your camera is connected, select your camera.

1 The difference between B and C is that B needs to set the port forwarding.

• Since the type of DDNS differs from the service type, refer to the related service site.

### Web Viewer Screen -Basic Screen

- Web viewer is optimized with explorer10 or above version and Firefox.
  - If VLC is not installed or VLC plugin is not supported (Chrome), Live buffering and Channel select menu on 3, 4 will be changed to Live Viewer menu, and then if HTML5(MJPEG) is selected on Live Viewer menu, then you can check the video.
- **1** Live video display. This is the region for live video stream from the camera.
- 2 Setup popup button. Click it to open the Setup page to setup details of IP camera like Video, Network, Events, System and etc. See the section 'Setup'.
- When the image goes unsmoothly because of bad network connection, it stored image during setup time and shows the image on the live view screen.
  - ☑ User will see the delayed images as much as setup time.
- Ochannel Select button. Select a stream produced from the camera between Stream 1 ~ 3 to display it in the live view screen.
  - Refer the 'Setup > Video & Audio > Video' to setup the Video Stream.

### Selow "Menu" is supported in accordance with models.

**PTZ Control** This camera model supports the zoom and focus.

#### Preset

Does not support.

Speaker Control Does not support.

Alarm Input Does not support.

Relay Out Does not support.

#### 6 Motion

It shows the Motion event status.

🛛 Event Alert Icon ( 🔀 ) appears if 'Motion Detection' is activated.

#### Camera Time

Display the camera time.

# Setup -Video Configuration

#### 1 Live Video Channel Setup

The video can be configured to variety settings with a combination of codec and resolution.

The camera performance has to be considered when setting multiple channels. This effects on the performance of the camera.

#### 2 Codec

Choose the video codec. According to the selected codec, the subcategories can be changed automatically.

#### **3** Description

Input the additional description about the selected channel. Max. 30 alphabets are allowed (Including space). For the description, English Alphabets, numbers and special characters ( - @.) can be used.

#### 4 Resolution

Select the video resolution.

Available resolution can be depends on the codec setup between the channels.

	NTSC	PAL
4M	2560 x 1440	2560 x 1440
3M	2304 x 1296	2304 x 1296
1080p/i	1920 x 1080	1920 x 1080
720p/i	1280 x 720	1280 x 720
SVGA	800 x 600	800 x 600

Target Bitrate	5120	[ 100Kbps ~	10Mbps]		
Extension Option	Off		Ŧ		
Quality		[1~10]			
		APPLY			

#### **6** GOP(Group of Pictures) Size

Set up the number of frames (P-frame) which contain only changed information based on basic frame (I-frame). Regarding videos with lots of movement, if you set GOP size bigger, only the number of P-frames is bigger. As a result, video resolution will be low but 'File size' and 'Bit-rate can be decreased.

#### ⊠ GOP(Group of Pictures) Size is..

I-frame and P-frame can be created for MPEG4 and H.264 video compression. I-frame (=key-frame) means the whole image data for one specific scene of video. P-frame is image data which has been changed information compared to I-frame GOP is made up of one I-frame and corresponding several P-frames. To improve video quality, set the number of P-frames smaller and to decrease image size, set the number of P-frames bigger.

#### Profile

The profile defines the subset of bit stream features in an H.264 stream, including color reproduction and additional video compression.

#### Baseline

A simple profile with a low compression ratio. The Baseline profile supports I-frames and P-frames.

#### Main

An intermediate profile with a medium compression ratio. The main profile supports I-frames, P-frames, and B-frames.

#### High

A complex profile with a high compression ratio. The high profile supports I-frames, P-frames, and B-frames.

#### 8 Smart Bitrate Control

### Off

You can not use the Smart Bitrate Control function.

#### **CVBR** (Framerate priority)

This Mode is for cameras which do not want absolute any frame drop, but still want to get lower bitrate. It has limitation when the Target bitrate is set to be very low, but actual motion is big or scene is very noisy.

#### **CVBR** (Quality priority)

When the Target bitrate is set to very low, and motion is big, then LBR will try to drop frames, and make the final fps to be lower, so that it can save its and make the output frames to have better quality.

#### CBR

This Mode is a CBR alike mode which is close to traditional security IPCAM, and it's not designed for LBR, It's provided as an option in LBR library just to help comparison.

# Setup -Video Configuration

Stream	Codec		Description

Extension Option	011	Ψ.	•	
Quality		[1~10]		
		APPLY		

#### 9 Bitrate Mode

Select the bit rate control scheme of video compression from CBR (Constant Bit Rate) or VBR (Variable Bit Rate).

#### CBR

To guarantee the designated constant bit rate, the quality of video are controlled in this mode. Therefore, the quality of video is likely to be varying when network traffic is changing.

#### VBR

To guarantee the designated quality, the bit rate of video stream is changed in this mode. Therefore, the frame rate of video is likely to be varying when network traffic is changing.

This category won't be appear if you select the codec.

#### 10 Target Bitrate

If Bitrate Control is set to be CBR, you can set the Target Bitrate.

#### 1 Extension Option

Off

You can not use the Extension Option.

#### SVC-T On

The H.264 SVC (Scalable Video Coding) is a video compre -ssion algorithm that enables effective and efficient trans -mission of video files over low bandwidth networks.

#### 12 Quality

For VBR control mode, The Target Quality of video can be setup.

B Click 'Apply' to make above setting effective.

# Setup - OSD Configuration

	L	APPLY	

### 1 Date/Time

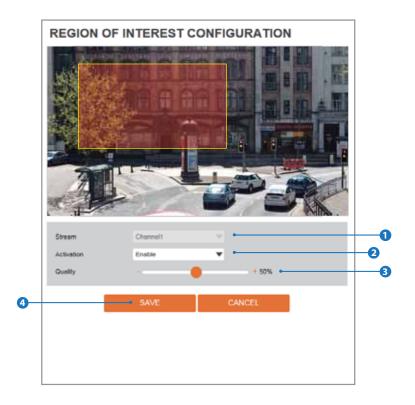

Display the current time.

#### **2** User Text

Output the TEXT entered by the user. Support a maximum of 30 characters.

3 Click 'Apply' to make above setting effective.

# Setup -Region of Interest Configuration

Region of interest function gives much more efficiency picture quality for indicated area to improve picture qualities of movement scene at the same bandwidth.

#### 1 Stream

Select the Stream. Select the Stream.

#### 2 Activation

The Region of interest can be enable or disable.

### 3 Quality

Set the quality of the set area.

**4** Click 'Save' to save the current settings.

☑ Click 'Cancel' to return to the previous setting.

# Setup -Privacy Mask Configuration

Use this function to mask areas that you want to hide on screen to protect privacy.

### 1 Activation

The Privacy mask function can be enable or disable.

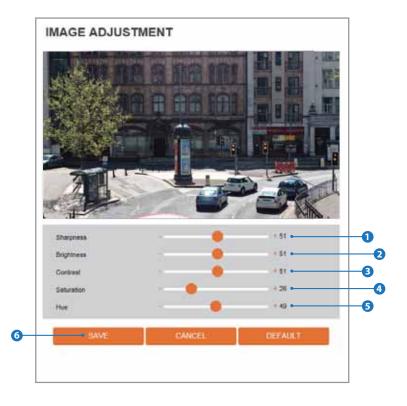

#### 2 Area

Select the Area1 ~ Area4 and Set the privacy area.

**3** Click 'Save' to save the current settings.

Click 'Cancel' to return to the previous setting.
 Click 'Clear Area' to delete the selected Area1~Area4.

# Setup -Camera Image Adjustment

### 1 Sharpness

Using this control, sharpness of image can be adjusted to meet your preference.

#### 2 Brightness

Using this control, brightness of image can be adjusted to meet your preference.

### 3 Contrast

Using this control, contrast of image can be adjusted to meet your preference.

#### **4** Saturation

Using this control, Saturation of image can be adjusted to meet your preference.

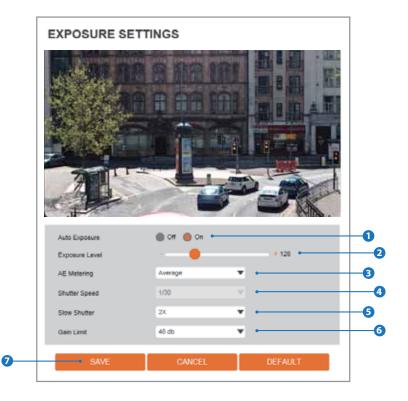

#### 5 Hue

Using this control, Hue of image can be adjusted to meet your preference.

**6** Click 'Save' to save the current settings.

Click 'Cancel' to return to the previous setting.
 Click 'Default' to settings to the factory defaults.

### Setup -Camera Exposure Settings

#### 1 Auto Exposure

Automatic exposure(AE) automatically sets the aperture or shutter speed, based on the external lighting conditions for the photo.

#### 2 Exposure Level

If this value is increases, the image becomes brighter.

#### 3 AE metering

AE metering mode refers to the way in which a camera determines the exposure.

#### 4 Shutter Speed

If this speed is faster, the moving object can be photographed without the ghost effect. However, picture can be dark if there is no sufficient lighting.

#### **5** Slow Shutter Level

Slow shutter Level lets you adjust the amount of light striking the sensor, and essentially determines when the video sensor sends out its batch of data for processing.

#### 6 Gain Limit

The smaller number makes the daker image.

Click 'Save' to save the current settings.
 Click 'Cancel' to return to the previous setting.
 Click 'Default' to settings to the factory defaults.

### Setup -Camera Day & Night Settings

Day & NgM	Auto     Dey     Night     Schedule	
Day & Night Color Level	Auto     Day     Night     Schedule	
Color Level	5 •	
Color Level B/W Level	5 V	
Color Level B/W Level Transition Time	S V	

#### 1 Day & Night

**Auto:** In this mode, the IR cut filter is removed automatically depending on the light condition around.

**Day:** In this mode, the IR cut filter is applied to the image sensor all the time. Thus, the sensitivity will be reduced in the dark light condition but the better color reproduction performance are obtained.

Night: In this mode, the IR cut filter on the image sensor is removed all the time. The sensitivity will be enhanced in the dark light condition but the image is black and white. Schedule: In this mode, Day / Night mode is converted accordance with the scheduled time.

### 2 Color Level

It is a level to change Night mode into Day mode when Day & Night mode is Auto.

#### B / W Level

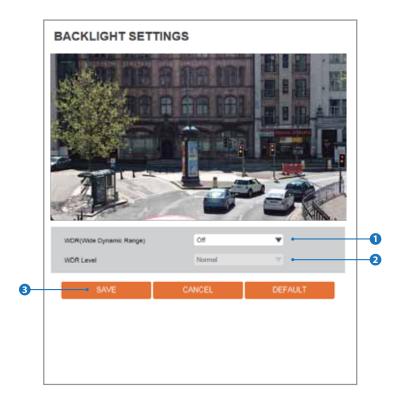

It is a level to change Day mode into Night mode when Day & Night mode is Auto.

#### **4** Transition Time

If it is set to Auto, to determine the rate at which Day / Night is converted.

- If it is set to schedule mode, Set the time that Day / Night is converted.
- G Click 'Save' to save the current settings.
   ☑ Click 'Cancel' to return to the previous setting.
   ☑ Click 'Default' to settings to the factory defaults.

## Setup -Camera Backlight Settings

This is a feature used for problematic light conditions where the contrast from light to dark areas is very high.

1 WDR (Wide Dynamic Range)

The WDR function can be enable or disable.

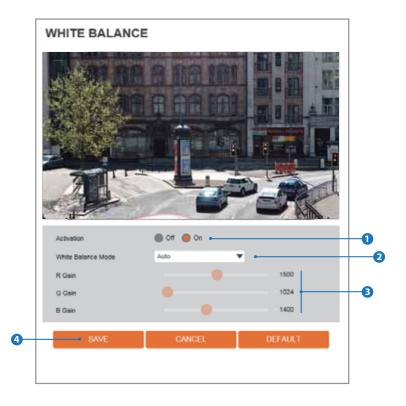

#### 2 WDR Level

Select the WDR level depending on the difference in brightness between the darkest and lightest part of an image.

3 Click 'Save' to save the current settings.
 Is a save the current setting.
 Is a save the current of the previous setting.

Click 'Default' to settings to the factory defaults.

# Setup -Camera White Balance

#### 1 Activation

White Balance can be enable or disable.

#### 2 White Balance Mode

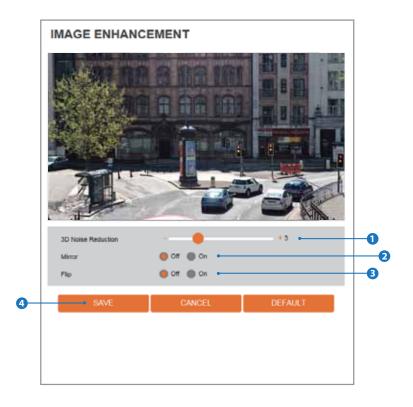

Select White Balance depending on the lighting conditions.

#### 3 RGB Gain

The R/G/B gain can be set only when the White Balance Mode is set to Manual.

Glick 'Save' to save the current settings.
 Click 'Cancel' to return to the previous setting.
 Click 'Default' to settings to the factory defaults.

# Setup -Camera Image Enhancement

#### **1** 3D Noise Reduction

3DNR function enables to suppress noise and retain good video quality in low light conditions.

#### 2 Mirror

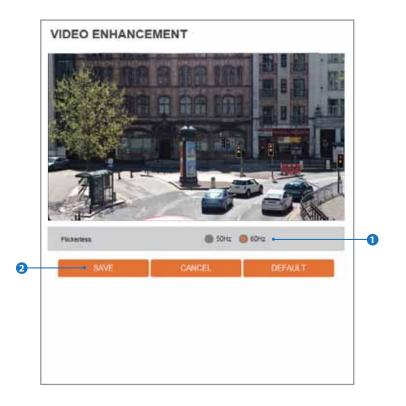

Reverse the video from side to side.

#### 3 Flip

Reverse the video from up to down.

Click 'Save' to save the current settings.
 Click 'Cancel' to return to the previous setting.
 Click 'Default' to settings to the factory defaults.

# Setup -Video Enhancement

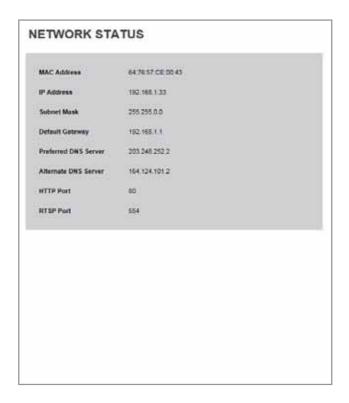

#### 1 Flicker

This function Enable to enhance the flicker situation.

2 Click 'Save' to save the current settings.

Click 'Cancel' to return to the previous setting.
 Click 'Default' to settings to the factory defaults.

This menu will show you all the information of Network setting in the camera. However, you cannot change those here.

Network Type Static Dynamic	•			-0
IP setup				
IP Address	192.168	3.1.113	•	
Subnet Mask	255.255	5.255.0	•	
Default Gateway	192.160	3.1.1	•	
Preferred DNS Server	168.12	3.63.1	•	
Alternate DNS Server	168.12	63.2	•	
Port Setup	80	[ Default: 60, 10	25 ~ 60000 ] •	0
HTTPS Port	443	[ Default: 443, 10	025 ~ 60000 ]	
RTSP Port	554	[Default: 554, 10	025 ~ 60000 ] •	
	1	APPLY		

#### 1 Network Type

Define network IP address type from the Static Mode for the fixed IP or the Dynamic Mode by the dynamic IP address. If you select the Static Mode, you must fill out IP Address, Subnet Mask, Gateway, DNS Server and all ports. If you select the Dynamic Mode, the IP address will be allocated automatically by DHCP equipment. If you click the Apply button to update changes, the system will be re-booted. In this case, you have to reconnect the camera using new IP address.

1

#### 2 IP Address

Define the IP address. The address is consisted of four numbers separated by dots and the range of each number is from 0 to 255.

#### Subnet Mask

Define the Subnet Mask. Format is same as the IP address.

#### 4 Default Gateway

Default the Gateway IP Address. Format is same as the IP address.

#### **5** Preferred DNS Server

Define the DNS server IP address. Format is same as the IP address.

#### **6** Alternate DNS Server

Define the Secondary DNS server IP address. Format is same as the IP address.

#### HTTP Port

The HTTP port can be set to 80 which default or in between 1025 to 60000.

#### **8** HTTPS Port

The HTTPS port can be set to 443 which default or in betwe -en1025 to 60000.

#### 9 RTSP Port

The RTSP port can be set to 554 which default or in between 1025 to 60000.

- Click 'Apply' to make above setting effective.
- ☑ If the network type is dynamic, the IP address is changed in below cases. Therefore, the IP address needs to be searched again, and the camera needs to be reconnected in these cases.
  - When the camera power is on / off.
  - After Firmware update, Default set and reboot.

# Setup -Auto IP Settings

Define the Event rule name.

# 2 Event

Select the event among motion detection, schedule. Click 'Cancel' to return to the previous setting. You need a event one more.

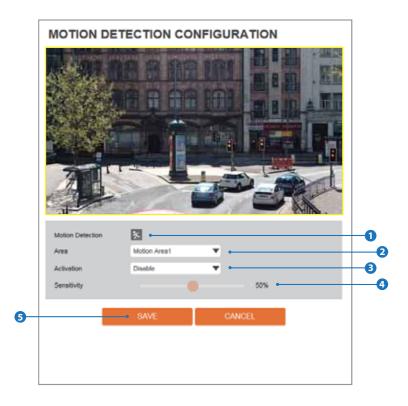

# 3 Rules

Select the action rule defined in the Trigger Action-Action rule menu.

### 4 Click 'Save' to save the current settings.

Click 'Cancel' to return to the previous setting.

# Setup -Motion Detection Configuration

## 1 Motion Detection

It shows the Motion event status. Event Alert Icon() appears if 'Motion Detection' is activated.

#### 2 Area

Set the motion detected area. You can set up to four areas.

# 3 Activation

Enable or Disable motion detection function.

#### 4 Sensitivity

Define the sensitivity of motion detection. If High value is selected, it will detect very small motion while it becomes relatively insensitive when Low value is selected.

Solick 'Save' to save the current settings.
 ☑ Click 'Cancel' to return to the previous setting.

	TEMPERAT	URE	
	General Setting		
	Mode Threshold	Fahrenheit V 150 [122 ~ 212]	0
	Temperature	118 'F	•
4		APPLY	

## 1 Mode

Select the either Fahrenheit and Celsius.

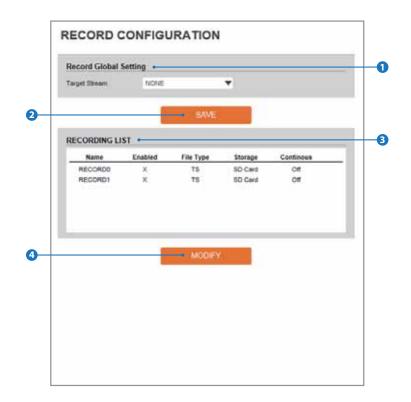

### 2 Threshold

Define the temperature at which the event trigger is occurred.

# 3 Temperature

It indicates the current temperature of the IP camera.

# Setup -Record Management

# 1 Target Stream

Select the channel you want to record video.

2 Click 'Save' to save the current settings.

# 3 Recording List

Display the information about the recording settings.

4 Click 'Modify' to modify the selected item in the recording list.

# Setup -Record Configuration

# Appendix A : Current TCP/IP Settings

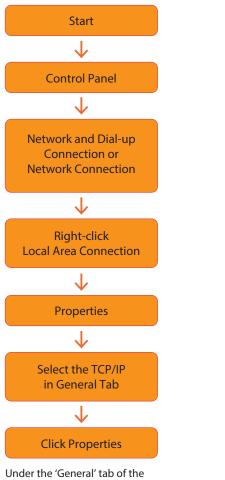

() If your IP settings are obtained automatically, you could use the MS-DOS prompt (or Command Prompt) to determine your IP address. For information on how to do this, please read the FAQ.

1. Windows 2000 or XP Users

Start

 $\downarrow$ 

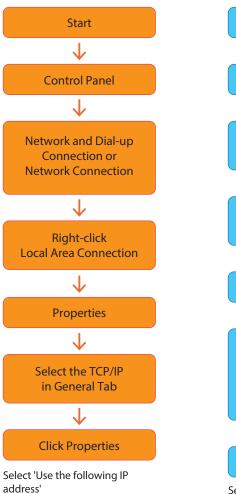

Under the 'General' tab of the TCP/IP Properties you will see your IP address information.

**Control Panel**  $\downarrow$ Network and sharing center  $\downarrow$ Manage network connections  $\downarrow$ **Properties**  $\mathbf{1}$ Select either Internet Protocol Ver.4 (TCP/IPv4) or Internet Protocol Ver.6 (TCP/IPv4)  $\downarrow$ **Click Properties** Under the 'General' tab of the

TCP/IP Properties you will see your IP address information.

# Appendix -B : Changing IP address and subnet mask

1. Windows 2000 or XP Users

2. Windows Vista or 7 Users

Start

 $\downarrow$ 

**Control Panel** 

 $\downarrow$ 

Network and

sharing center

 $\mathbf{1}$ 

Manage network connections

 $\downarrow$ 

Properties

 $\mathbf{1}$ 

Select either Internet Protocol

Ver.4 (TCP/IPv4)

or Internet Protocol Ver.6 (TCP/IPv4)

 $\mathbf{1}$ 

**Click Properties** 

Select 'Use the following IP address'

# Appendix -C : Port Forwarding

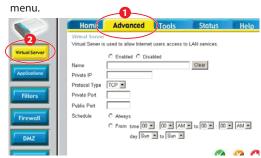

After assigning the IP Camera a web server port and video server port you must use Port Forwarding. (for cases A, B)

Please consult your router's user guide on how to correctly configure Port Forwarding.

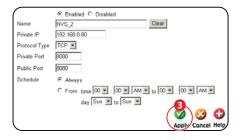

For your convenience, we have provided two example configurations.

#### 1. For D-Link DI-604 broadband routers:

- 1) Open a web browser and type http://192.168.0.1 into your Address bar. (the default IP address to access the router)
- You will have to supply your User Name and Password to log onto the router. Default from factory. (User Name: admin Password: [leave blank])
- 3) Select the "1 Advanced" tab and click "2 Virtual Server"

4) Click **(S**Apply' button after inputting proper values. The example is as below

Enabled / Disabled	Select "Enabled".
Name	Input IVS name.
Private IP	Input IVS address.
Protocol Type	Select "TCP".
Private Port / Public Port	Input IVS Web Server Port.
Schedule	Select "Always"

5) If 'Setting Saved' shows, click [Continue] button.

6) With the same method as above, add Video Server Port.

7) The Web Server Port, Video Server Port and 2 Audio Ports shows in "Virtual Server List" as below.

Private IP	Protocol	Schedule	
192.168.0.80	TCP 8080/8080	always	-2 📋
192.168.0.80	TCP 7777/7777	always	21
192.168.0.80	TCP 7778/7778	always	21
192.168.0.80	TCP 7779/7779	always	211
192.168.0.80	TCP 7780/7780	always	21
	192.168.0.80 192.168.0.80 192.168.0.80 192.168.0.80	192.168.0.80         TCP 8080/8080           192.168.0.80         TCP 7777/7777           192.168.0.80         TCP 7778/7778           192.168.0.80         TCP 7779/7779	192.168.0.80         TCP 8080/8080         always           192.168.0.80         TCP 7777/7777         always           192.168.0.80         TCP 7778/7778         always           192.168.0.80         TCP 7779/7779         always

#### 2. For Linksys BEFSR41 Cable/DSL routers:

- 1) Open a web browser and type http://192.168.1.1 into you Address bar. (the default IP address to access the router)
- 2) You will have to supply your User Name and Password to log onto the router. Default from factory (User Name:[leave blank] Password: admin)
- 3) Select "4 Applications & Gaming" from the menu bar.

Enabled / Disabled Input IP Camera name.						
		Input IP Camera Web Server Port and Video Server Port.			and Video	
Start / End		Start should be same as End.				
		Both of Web Server Port and Video Server Port should be added.				
Protocol	Se	Select "TCP" in Protocol option.				
IP Address	In	Input IP Camera IP Address.				
Enabled	Cł	Check the square.				

# Appendix -C : Port Forwarding

#### 3. For Netgear RP614 routers:

- 1) Input http://192.168.0.1 in address bar of web browser. http://192.168.0.1 is the default IP address.
- 2) If it asks ID and password, input admin as ID and password as password.
- 3) Click "Port Forwarding" in "Advanced".
- 4) Click "1 Add Custom Service" button in Port Forwarding

page.

Service Name Server IP Address SERVICES I 192, 168, 0 Add	Port Forwarding		
	Service Name		

5) Input proper values in "Ports - Custom Services" page as below.

🗆 Enable	
Service Name	
Starting Port	(1~65535)
Ending Port	(1~65535)
Server IP Address	192 168 0

$\mathbf{\tilde{\mathbf{v}}}$		
Enable	Check it.	
Service Name	Input IP Camera name.	
Starting/ Ending Port	Input IP Camera Web Server port. Starting Port should be same as Ending Port.	
Server IP Address	Input IP Camera IP Address.	

6) Click "2 Add" button.

7) With the same method as above, add Video Server Port.

8) Click "Apply" button to finish Port Forwarding.

### 1. My POWER light is not on?

Power is not being supplied to the unit. Please use the power supply shipped with the unit and verify that a power source is active from the attached power outlet used to connect the adapter. You can test this by plugging in any other electrical device and verify its operation. After using the power supply shipped with the product, checking the power source, and reinserting the power connector into the IP Camera, please call our Support Center. The power supply may be defective.

## 2. My ACTIVE light is not flashing?

Verify the power supply to the unit. Power off the unit and back on again, wait 1 minute, if the ACTIVE light still does not begin to flash, you will have to set the unit to its factory default (THIS WILL DELETE ANY CONFIGURATION AND SET THE UNIT TO THE FACTORY DEFAULTS). Power on the unit and insert the end of a paper clip into the small recessed opening on the back of the unit. Use the clip to press the button located within that opening.

## 3. My LINK light is not flashing or solid?

Verify the cable connection. 99% of the time the cable's connection to the unit is causing this problem. Try using a different network cable or crossover cable (for PC connection only). Try reinserting the cable, if this still doesn't solve the problem call our Support Center.

4. I can access the video server on my LAN, but not from the Internet.

Verify that your router (if applicable) has port forwarding properly configured. If accessing from our DDNS service, verify correct serial number. Firewall issues may prevent user access.

5. How do I open an MS-DOS or Command Prompt? Start > (All) Programs > Accessories > Command Prompt

# 6. How do I find out my IP address information if my settings were automatically detected?

- 1) Open a Command Prompt
- 2) At the prompt type "ipconfig / all" (without the quotes)
- Near the end of the information supplied, should be your current IP address, subnet mask, default gateway and DNS servers

## 7.I can't connect!!

In the case of a connection failure.

Modem Reboot > Modem Reboot Finished > Router Reboot > Router Reboot Finished > IP Camera Reboot > IP Camera Reboot Finish > Verify DDNS and IP Camera connection, if applicable.

### 8. How do I "PING" an IP address?

1) Open an MS-DOS (or Command) prompt

- 2) At the prompt type "ping xxx.xxx.xxx.xxx" (without the quotes and replace the "x"s with an IP address)
- 3) Press Enter

#### 9. I'm accessing my video server remotely over the Internet and the video stream is choppy, is this normal? Yes. The frames per second received remotely are determined by your bandwidth capabilities both at your site where the IP Camera is installed and your remote location. The lower of the two sites will determine how fast your video stream is received. It is recommended to have at least a 256Kb/sec upstream connection from the site where the IP Camera is installed. Lower speeds will operate properly, but provide poor remote performance. The Faster the Internet connection at both ends, the faster the video stream.

#### 10. How do I enable or check VLC on my browser

#### Internet Explorer

Open Internet Explorer > Tools on the menu bar > Internet Options > Security Tab > Custom Level > Scroll down and verify that you are prompted or have enabled plug-ins to be downloaded and executed. > click OK > restart browser.

#### Chrome

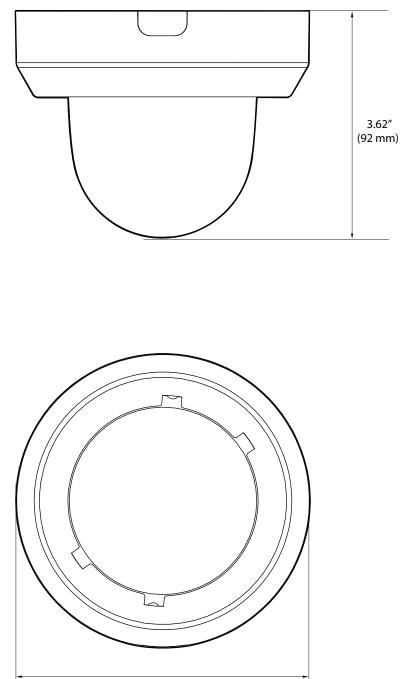

Open Chrome > Chrome menu settings > Advanced settings > Individual information - content settings > Run automatically

## 11. How do I reset the unit to factory defaults?

Refer to the previous functions page and find the reset button. Power ON the unit and use a paper clip to push the reset button within that opening. You should then see the ACTIVE light turn off and after a few seconds the ACTIVE light will begin to flash, signifying a successful reboot. If the ACTIVE light does not turn off after depressing the reset button, please try holding the button in for a few seconds and releasing. YOU WILL LOSE ALL DATA THAT HAD BEEN ENTERED PREVIOUSLY AND THE IP CAM -ERA WILL BE SET TO ITS FACTORY RESETS.

# Warranty Information

**Digital Watchdog** (referred to as "the Warrantor") warrants the Camera against defects in materials or workmanships as follows:

Labor: For the initial five (5) years from the date of original purchase if the camera is determined to be defective, the Warrantor will repair or replace the unit with new or refurbished product at its option, at no charge.

Parts: In addition, the Warrantor will supply replacement parts for the initial five (5) years.

To obtain warranty or out of warranty service, please contact a technical support representative at 1+ (866) 446-3595, Monday through Friday from 9:00AM to 8:00PM EST.

A purchase receipt or other proof of the date of the original purchase is required before warranty service is rendered. This warranty only covers failures due to defects in materials and workmanship which arise during normal use. This warranty does not cover damages which occurs in shipment or failures which are caused by products not supplied by the Warrantor or failures which result from accident, misuse, abuse, neglect, mishandling, misapplication, alteration, modification, faulty installation, set-up adjustments, improper antenna, inadequate signal pickup, maladjustments of consumer controls, improper operation, power line surge, improper voltage supply, lightning damage, rental use of the product or service by anyone other than an authorized repair facility or damage that is attributable to acts of God.

# Limits & Exclusions

There are no express warranties except as listed above. The Warrantor will not be liable for incidental or consequential damages (including, without limitation, damage to recording media) resulting from the use of these products, or arising out of any breach of the warranty. All express and implied warranties, including the warranties of merchantability and fitness for particular purpose, are limited to the applicable warranty period set forth above.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above exclusions or limitations may not apply to you. This warranty gives you specific legal rights, and you may also have other rights from vary from state to state.

If the problem is not handled to your satisfaction, then write to the following address:

Digital Watchdog, Inc. ATTN: RMA Department 5436 W Crenshaw St Tampa, FL 33634

Service calls which do not involve defective materials or workmanship as determined by the Warrantor, in its sole discretion, are not covered. Cost of such service calls are the responsibility of the purchaser.
