Secure the Boot

PG9WLSHW8 / PG9HRDW8

Tape[1]

The PG9WLSHW8 / PG9HRDW8 hardwired to PowerG wireless module has a front and rear tamper. The front tamper boot can be accidently knocked off if the cover is not handled with care.

➢ **Tech Tip:** When removing the cover of the PG9WLSHW8 / PG9HRDW8 module, double check for the rubber tamper boot. Secure the boot to the post with a piece of electrical tape[1] so it doesn't get dislodged or lost… DO NOT tape over the tip.

➢ **Tech Tip:** The tamper boot is the same one used on the old WS4945 wireless transmitters. Just in case one is needed due to the sudden disappearance of the original boot.

[1] Tape not provided
